Generative AI Usage Final

Group 46

Moad Matoug, 14433672

Bart van der Lee, 14464306

Thom Varela Nunes, 14609096

Melih Metin, 13993208

| Generative AI Usage | Reasons of Usage | In which parts? | Which prompts were used? |
|---|---|---|---|
| ChatGPT with GPT 3.5 | To get a better understanding of plotly | Visualization process | I have a df called df consisting of NBA players per season with the following columns (…)<br>Which plotly graphs and variables could be used to get a better understanding of the production of the average player per season |
| | To help with coding | Visualization process | Use plotly to get a boxplot for the salary for every position |
| | To help with coding | Visualization process | Make another boxplot for the usage rate(USG%) for seasons (season) 2000, 2006, 2011, 2017 |
| | To get a better understanding of plotly and coding | Visualization process | I want to compare the PER (player efficiency rating) and the salary, also use the positions in the same plotly graph |
| | To help with coding | Visualization process | Make a line graph to compare the RAPTOR and salary per season and another one for PER and salary |
| | To help with coding | Visualization process | Use plotly to get a comparison between the RAPTOR and salary use Pearson |
| | To help with coding | Visualization process | use a different chart you can make 2 seperate charts next to each other one for 2PA and 2p% and one for 3PA and 3P% |
| | To help with coding | Visualization process | Make a bar chart with per season, different colors for different teams, that gives the total salary spent |
| | To help with coding | Visualization process | i have a df called df with players in the nba from 2000-2017 using the following imports choose an original chart (no line or bar or boxplot) that shows the following per season the minutes they played (MP) this is total of the season and the usage rate (USG%) if you want you can divide MP by GP (games played) to get a lower number minutes per game |
| | To help with coding | Visualization process | Use a new chart again thats completely original using plotly where we look at the average BPM per season |
| | To help with coding | Visualization process | Make a scatterplot that shows the correlation between PTS per season and the salary of players |
| | To help with coding | Visualization process | Make a barplot for the overall salaries per season |
| | To help with coding | Visualization process | Make a plot to compare the average minutes played per game and WS per season. The average minute played per game can be calculated by dividing MP by G |
| | To help with text | Conclusion | Which part of the following text is unnecessary […] |
